|---|---|
| Offer Text : <i>Offer No:1496</i> | <p>A Turkish patent owner is seeking a partner who is interested in his Project. The summary of the Project and the objective of the proposal by his own words can be viewed and evaluated in the following lines: “We applied for patent right from Turkey in April 2009 and it was officially registered in Sep. 2011. Our project is the first and unrivalled in its field. INNOVATIVE ASPECTS This method operates substantially by means of the difference of heat and pressure. No matter what the outside temperature is, if the water/vapour in the pipe braid or radiator system is hotter than the medium, then the air beneath the upper coating will be heated. And this will cause an air flow to be generated. Thus, in an area where the air temperature at the outside is between -10 and -50 °C, energy can easily be generated even by means of a water source at 0 °C. WHAT I DEMAND? I want to prevent my patent rights the entire world. But I haven’t enough money to apply. Additionally I couldn’t establish a prototype and advertise my project. So that I need partnership to share some costs in order to prevent and advertise my project. Unfortunately we have only 5 days to apply the other countries. (The last day to apply is 16 October 2011).</p> |
| Activities found in the offer : | <ul style="list-style-type: none"> • Machinery, equipment, appliances, apparatus and associated products • Electricity, gas, nuclear energy and fuels, steam, hot water and other sources of energy |
