

Andhra Pradesh

Technology Support

Technology is the key element contributing to productivity, quality, competitiveness and market acceptability of products. In a rapidly changing global scenario, technology and business incubators have emerged as useful instruments for innovation.

To provide technological support to the local industries, the Government of Andhra Pradesh, Confederation of Indian Industry (CII) and Technology Information Forecasting & Assessment Council (TIFAC) jointly promoted Andhra Pradesh Technology Development and Promotion Centre (APTDC) for transfer of technologies, providing technological know-how, commercialisation of technologies, technology upgradation etc.

In line with this objective, APTDC is in the process of developing "T" Incubator - a technology incubation programme which is an innovative system designed to assist entrepreneurs in the development of new technology based firms.

Apart from this, the Indian School of Business "K-hub" was developed to create linkages among the technology providers, academicians, incubators and business development services. This will help promote development of high quality entrepreneurship and pool & share international best practices in incubation/ mentoring processes.
