Prevention of Industrial Sickness

For prevention and cure of Industrial Sickness the following mechanism is proposed to be set up:

- Credit and Performance rating for identification of Sick Units so that genuine help may be expended to them
- The Government plans to set up a mechanism to detect the reasons for possible sickness of a particular industrial sector as a whole over a period of time through studies so that these reports could serve as whistle-blowing exercises in advance to enable appropriate Government interventions to be made in time to prevent the sector falling sick.
